

A walk down the River Nile

Most of Egypt is a vast desert with almost no rainfall. The River Nile is one of the longest rivers in the world and it flows northwards from the mountains of Tanzania for over 6,000km on its way to the Mediterranean Sea. The ancient Egyptians lived and farmed along the Nile, using the soil to produce food for themselves and their animals. The river continues to become a useful place for the people living nearby. It is home to many fish and provides a valuable source of food. The river can also be used for transportation and agriculture. Can you use different materials to create your own River Nile?

Key vocabulary:

- Transport
- Boat
- Agriculture
- Growing crops
- Ancient Egypt
- Mediterranean Sea
