**This week  
we are  
learning  
to...**

### Literacy

This week in our Creative Writing lesson, the children will be wearing their Green Thinking Hats and writing a report about a 'classroom break-in.' The children will identify features of a newspaper report and will use adjectives to make their work more interesting for the reader. At home, you can create your own report about something the children have seen in the news. In Phonics, the children will be continuing looking at the /sh/ sound and are encouraged to write a list of different words starting with this sound.

### Maths

This week in our Maths Number lesson, the children will develop their problem solving and reasoning skills through a selection of worded addition problems. They will be looking in their 'thinking toolbox' to select the resources they would like to use and will use their metacognitive skills to plan, monitor and evaluate their ability in solving the addition problems. At home, you can give your child simple worded problems to solve. In Maths Project, the children will continue to work with coins and will be calculating change. At home, continue to practise using coins through role play.

### Science

This week in Science, the children will continue exploring magnets. The children will get hands-on experience observing how magnets attract and repel, as well as exploring how the strength of magnetic force changes with distance. At home, your child can test how magnets attract and repel, and even explore how the strength of a magnet changes depending on what's between it and an object.
