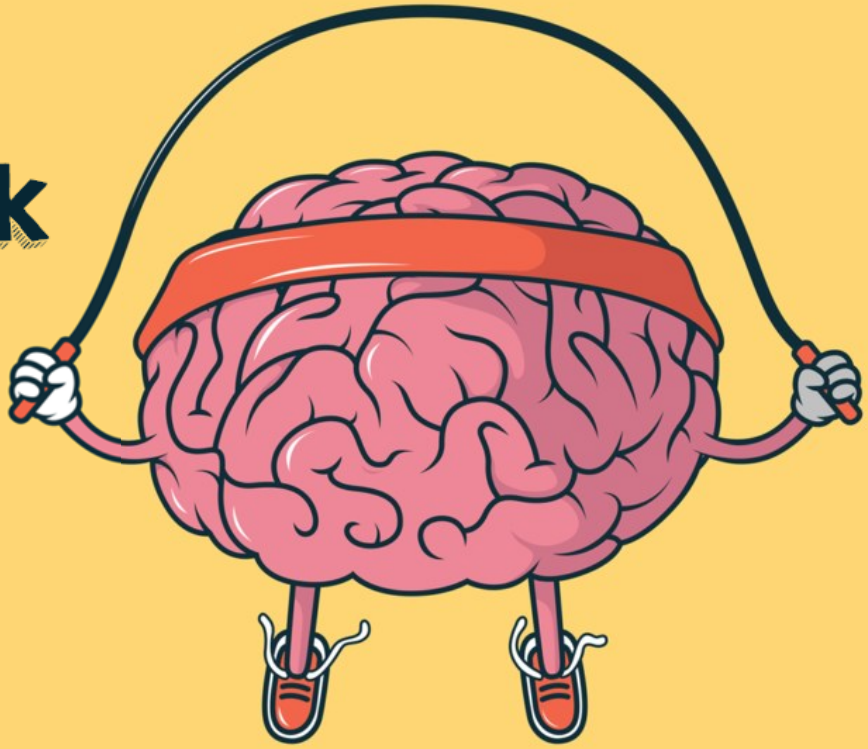
W/C: 10.02.2025

This week we are learning to...



Maths

This week, the Hedgehogs' class will be looking at the concept of 'long' and 'short'. We will be using construction materials and Duplo to make different lengths, as well as looking at how to use rulers to make long and short lines. You can encourage this learning at home by using materials like yarn or string as measuring tools to reinforce the keywords.

Literacy

This week, we will be looking at forms of technology we can explore when mark making. Using the light box, the children will discover mark making in space and will draw planets in the dark, linking this to skills of drawing recognisable shapes. We will be paying close attention and supporting the children with their pencil grip. We will also be using a paint app on the computer to support their ICT.

If you have electronic devices at home, allow your child to explore a simple drawing app. Using their fingers as a tool to mark make is great for developing their fine motor skills.

Maths

This week, we will being using the children's knowledge to begin to sort objects by shape, size or colour. We will be looking for the children to identify similarities in objects in order to group them together. A simple activity to support this could be separating Duplo blocks into different colours. For a more difficult activity, you could look at sorting the blocks by sizes or shape.
